

## Display & Imaging Division

### Reliable support for a fast-paced, technology-driven society

Pursuing a high level of expertise in electronics, including materials for LCDs and other types of FPDs (Flat Panel Displays), copiers/printers, electronic components, and LED encapsulants

Toyohiro Akao  
General Manager,  
Display & Imaging Div.

The Display & Imaging Division deals in components and materials for FPDs including LCDs, color materials for toner and inkjet cartridges for copiers/printers, and materials for clean energy-related devices, including solar panels.

In cooperation with the Electronics Materials & Equipment, Chemicals, and Plastics divisions, and our regional operations, we are committed to offering a broad range of services. Our services include the provision of advanced expertise and logistics management in every process from handling to processing materials.

In addition to focusing on existing products as our core area of business, we constantly seek to venture into new fields. Our goal is to be of service to many different industrial sectors and geographic regions, and to maximize Inabata's brand value in the market.

#### Flat Panel Display Group

Sale of LCD films, inverters, and other materials and components to the electronics industry as well as sale of touch panel components to LCD panel manufacturers

##### Products

Polarizing films, anti-reflection materials, alignment layer materials, backlight unit modules, backlight additives, glass substrate for LCD, electronic parts for LCD back light units, chemical products for LCD manufacturing process, circuit components, encapsulant for LED

#### Electronics Materials Group

Sale of materials for semiconductor encapsulants and development of new businesses, such as rechargeable batteries

##### Products

Materials for EMC applications, materials for magnetic media, high grade powders, binders, connectors, materials for cables, materials for solar batteries, functional films (PET, PEN, PI)

#### Imaging & Information Group

Sale of components and materials to copier/printer businesses

##### Products

Materials for copiers and printers, color materials for toner and inkjet cartridges, components for cartridges, PET and PEN films, silicone, alumina

# | Electronics Materials & Equipment Division

## Comprehensive service and support for electronic device business

Offering total solutions for semiconductor, FPD, and electronic component manufacturing processes through a combination of production equipment, testing instruments, and a wide range of materials

Toshiyuki Suganuma  
General Manager,  
Electronics Materials & Equipment Div.

The rapid evolution of our information technology society is backed by the remarkable progress in electronic devices, including semiconductors and FPDs.

The Electronics Materials & Equipment Division markets vacuum devices made by ULVAC, Inc., as well as production equipment and testing instruments by brands from around the world, for use at advanced electronic device production processes. We also carry a variety of electronic materials, including ULVAC Coating Corporation's mask blanks, which are used as photolithographic mother plates of circuit patterns, pellicles, anti-reflection coating materials, sputtering targets, and wafers.

We provide total support for ever-advancing electronic device production processes by offering state-of-the-art equipment and materials which have been optimized for these production processes.

### | Electronics Materials Group

Sale of materials for use in semiconductor, FPD, and electronic component production processes

#### Products

Mask blanks, pellicles, anti-reflection coating materials, wafers, other electronics materials

### | Equipment Group

Sale of equipment for use in semiconductor, FPD, and electronic component production processes

#### Products

Semiconductor and FPD manufacturing equipment, wet/dry cleaning equipment, inspection and metrology equipment, laser processing systems, IC pick & place machines, bonding machines
