

Housing & Eco Materials

The **Housing & Eco Materials Division** is responsible for sales of building materials, housing equipment, and other environmentally friendly products.

These solutions include importing building materials and distributing them throughout Japan. By offering original solutions through our global network, we strive to cater to diverse customer needs.

As construction of new houses continues to decline, Japan's housing business is expected to become more diverse and challenging with differing demographics. Catering to these up and coming challenges means delivering varied types of housing for a varied population as well. Meanwhile, Japanese manufacturers of housing, building materials, and housing equipment are expected to make rapid inroads into overseas housing markets, attracted by their high growth potential.

In order to meet such diverse needs, we in the Housing & Eco Materials Division are committed to tapping opportunities in the housing markets. We will do this by providing wide-ranging expertise and a comprehensive product mix.

Tomohiko Sato
General Manager
Housing &
Eco Materials Div.
